

Rare lung tumours, day 2 morning, November 6th 2014

Case 1	Male, 44. Incidentally discovered lung tumour. Present for three years.		Alveolar adenoma
Case 2	Male, 87. Biopsy right main bronchus		Mucus gland adenoma
Case 2	Female, 50. Tumor in left upper lobe; biopsy squamous cell carcinoma		Pneumocytic adenomyoepithelioma
Case 4	Male, 49, lung nodule		Sugar tumour
Case 5	Female, 56. Tumour right lower lobe.		PEComa
Case 6	Female, 42, tumor left lower lobe		Pulmonary blastoma
Case 7	Male, 67. Lung tumour, slow growth		Lymphoepithelial like carcinoma
Case 8	Subpleural tumor, 3cm, left lower lobe.		Epithelioid hemangioendothelioma
Case 9	Male, 30. 3cm mass that surrounded the left upper main stem bronchus. Left lobectomy, 2,5cm tumour.		Granular cell tumour
Case 10	Male, 64. Tumour in the right upper lobe of the lung		Glomus tumour
Case 11	Male, 38. Tumour left upper lobe.		Fetal type adenocarcinoma
Case 12	Female, 56. tumor caudal part right upper lobe		Solitary fibrous tumour.
Case 13	Female, 53. Lung nodule resected		Sclerosing pneumocytoma
Case 14	Male, 65. Interstitial lung disease, probably drug induced; medication for renal Tx. Incidental finding in single lung section		Meningiothelioid nodule
Case 15	Male, 76. Tumour right middle lobe.		Giant cell carcinoma

Sarajevo BD-IAP 2014 Slide seminar

Case 16	Female, 42. Tumour in right lung		Spindle cell sarcoma?
Case 17	Female, 67. Large lung tumour		Large cell carcinoma, pleomorphic subtype NB contentious Dx, should have recognizable NSLC with pleomorphic component
Case 18	Female 63, tumor in the periphery of the left lower lobe		Sclerosing pneumocytoma
Case 19	Male, 79, lung tumour		Carcinosarcoma
Case 20	Male, 53. Pneumonectomy right lung for large lung mass (CK AE1/3+)		Primary pulmonary angiosarcoma
Case 21	Female, 48. Tumour right upper lobe, 2,5cm		Adenoid cystic tumour
Case 22	Pleural tumor		Adenomatoid tumor
Case 23	Female, 33, Pleural effusion, thickened pleura, biopsy		Epithelioid hemangioendothelioma
Case 24	Male, 4 biopsy tumor right upper lobe		Inflammatory myofibroblastic tumour (Alk+)
